New *and* Forthcoming Books

The University of Chicago Press

A Guide to the Study of the Christian Religion. Edited by
Gerald Birney Smith.

x+760 pages, 8vo, cloth; \$3.00, postage extra (weight 3 lbs.)

The history of Christianity can no longer be studied in isolation from the total history of which it is a part. The study of the Bible must be undertaken with a full understanding of all that is involved in the processes of historical criticism. An entirely new realm of theological training has been organized in order to prepare men to understand the social problems which are so intimately related to the religious life. What theological scholarship is doing in this direction today is set forth in this volume by a group of well-known men, each contributing an exposition of the problems and the methods of study in the field in which he himself is competent to speak.

The contributors to this volume are President W. H. P. Faunce, of Brown University, Professor Francis A. Christie, of Meadville Theological Seminary, Professor George Cross, of Rochester Theological Seminary, and the following from the University of Chicago faculties: Ernest DeWitt Burton, Shailer Mathews, J. M. Powis Smith, Edgar J. Goodspeed, Shirley J. Case, Errett Gates, Theodore G. Soares, George B. Foster, the late Charles R. Henderson, and the editor of the volume, Gerald Birney Smith.

This comprehensive survey of the methods and achievements of modern theological scholarship is the first book in English for twenty years to cover a similar field.

Six Lectures on Architecture. (*The Scammon Lectures, 1915.*)
The Art Institute of Chicago. Profusely Illustrated.

8vo, cloth; \$2.00, postage extra

This latest volume in the notable series of "Scammon Lectures" delivered at the Art Institute of Chicago, includes

lectures by three distinguished American architects who speak with authority in their own special fields. Ralph Adams Cram, A.N.A., Litt.D., of Boston, contributes two lectures on the general subject of "The Promise and Fulfilment of Gothic Architecture," the first lecture being on "The Beginnings of Gothic Art" and the second on "The Culmination of Gothic Architecture." Thomas Hastings, N.A., LL.D., of New York City, also contributes two lectures, one on "Principles of Architectural Composition" and one on "Modern Architecture"; and Claude Bragdon, Fellow of the American Institute of Architects, has two contributions on "Organic Architecture" and "The Language of Form."

This artistic and richly illustrated volume will be of absorbing interest to architects and other lovers of the fine arts because of the striking originality, literary form, and practical suggestion of the contents.

Agricultural Economics. (Materials for the Study of Economics Series.) By *Edwin G. Nourse, Professor of Economics in the University of Arkansas.*

900 pages, 8vo, cloth; \$2.75, postage extra

This book brings together in an orderly arrangement a store of information for the student who desires to understand the economic phenomena of agriculture, and also a considerable number of opinions which have already been expressed as to the meaning of these facts. The introductory discussions contributed by the editor do not attempt to reconcile the theories of the authors quoted, but either suggest the reasons for including particular selections, point out the salient aspects of the problem dealt with in the chapter, or emphasize the need of more careful scrutiny of one or another phase of the subject. The use of more and shorter readings, the greater stress upon organization of the selected material, and the chapter introductions make this volume less a source book in the older sense of the term, and give to it many of the desirable features of a text. In this form the author believes it has the greatest teaching value. It is intended primarily as the basis for a general course in agricultural economics covering a college year, and may be used separately or in connection with a

regular text. The book will also be found a useful supplement in courses on marketing, rural credits, and similar subjects. A classbook of questions and exercises is being prepared to accompany the volume.

The Psychology of Religion. (Handbooks of Ethics and Religion Series.) *By George Albert Coe, Professor of Religious Education in Union Theological Seminary.*

350 pages, 12mo, cloth; \$1.50, postage extra

Primarily a handbook for beginners in the psychological analysis of religion, the book gives particular attention to problems, points of view, authors, types of investigation, and kinds of data. With its alphabetical author-list of more than three hundred titles, and its topical lists, it presents an extensive apparatus for the use of students and teachers on the subject. It analyzes religious phenomena from the point of view of both the structural and functional methods, and religion is made to appear as a progressive realization of a society of personal selves. Students and ministers and educators will find a storehouse of material for thought and investigation in this book by one of the foremost students of religion in the country.

Slavery in Germanic Society during the Middle Ages. *By Agnes Mathilde Wergeland, Late Professor of History in the University of Wyoming.*

xvi+158 pages, 16mo, cloth; \$1.00, postage extra (weight 14 oz.)

In the preface to this little book, which is issued as a memorial volume, Dr. J. Franklin Jameson, of the Carnegie Institution of Washington, gives a striking appreciation of the scholarly pursuits and achievements of the author, and concludes with this estimate of the present monograph: "Dr. Wergeland's contribution is marked by great learning. The reader will also see the evidences of logical, and even of philosophical, thinking, and of a large, general grasp of the institutional history of Northern Europe as a whole. He will see a close appreciation of economic motives." This study of mediaeval slavery helps materially to a true understanding of American slavery in some of its most essential aspects.

History of the Working Classes in France. By Agnes Mathilde Wergeland.

viii+136 pages, 16mo, cloth; \$1.00, postage extra (weight 12 oz.)

This review of Levasseur's *Histoire des classes ouvrières et de l'industrie en France avant 1789* is not merely an ordinary review, but a running commentary in brief for which the author showed his warm appreciation; and it illustrates the chief interests of Professor Wergeland's life, the study of economic causes and results operating for or against the well-being of the poor, particularly during the period of the Middle Ages.

Teaching High-School Latin. By Josiah B. Game, Professor of Ancient Languages in the Florida State College for Women.

viii+124 pages, 16mo, cloth; \$1.00, postage extra (weight 10 oz.)

A practical working manual for Latin teachers prepared by a teacher of remarkably successful experience in the high school, normal school, and college. In the first part of the book are definitely marked out the function of Latin in the education of young people and the work which the teachers of Latin in the high school must do. The main portion of the book discusses the ways and means of advancing these ends, and the latter part is devoted to suggestions designed to add to the interest of the department. The book will be particularly stimulating to young teachers beginning their work.

The Origin and Growth of the Hebrew Religion. (Handbooks of Ethics and Religion Series.) By Henry Thatcher Fowler, Professor of Biblical Literature and History in Brown University.

160 pages, 12mo, cloth; \$1.00, postage extra

The present volume is designed to offer a guide for study rather than simply a new essay on the history of Israel's religion, and is intended for use in connection with the Old Testament by college students and church classes of adults and young people. It has been written out of a long experience in teaching college classes, and the remarkable rise of the Hebrew religion into the exalted idealism of the greater prophets is told in an effective and inspiring way. Some of the chapter headings are "Religion and National Life," "Religion and Law," "The Discovery of the Individual," "Two Ideals from the Exile," and "Israel's Contribution to Universal Religion."

The Control of Hunger in Health and Disease. By *Anton Julius Carlson, Professor of Physiology in the University of Chicago.*

viii+322 pages, 8vo, cloth; \$2.00, postage extra

This volume describes a notable series of experiments conducted by the author in the physiology of the stomach. The description of the hunger pangs in fasting and their effects, as well as the remarkable method of measuring and recording them, constitute a unique contribution to science; and incidentally the author indicates how hunger may be controlled and how and when starvation becomes beneficial to the human body. Many of the fundamental experiments were first made on a healthy man who was affected with complete obstruction of the esophagus and with gastrostomy of more than twenty years' standing. They were then extended to a great number of persons, both healthy and diseased. Some of the experiments were made on the author himself.

The subjective and objective control of hunger and appetite is of practical importance in digestion and nutrition, especially in disease, where the control of the disease processes is so frequently dependent on improvement in vitality and nutrition. Professor Carlson's volume is the most extensive work yet published in this field of physiological investigation.

The Origin of the Earth (*The University of Chicago Science Series.*) By *Thomas Chrowder Chamberlin, Head of the Department of Geology in the University of Chicago.*

xii+272 pages, 12mo, cloth; \$1.50, postage extra (weight 1 lb. 6 oz.)

This book, by one of the leading geologists of the world, sets forth the disclosures that led to the rejection, one after another, of the older views of the origin of our planet, the futile attempts then made to emend these or to build others upon the same foundations, the final rejection of all these, and the construction of a radically new view based on a new dynamic foundation. The later chapters of the book treat of the early stages of the earth and the way its leading processes took their start from their cosmogonic antecedents, these being held to be essential parts of the genesis of the planet. The beginning of the inquiry is set forth in the Introduction; the successive chapters are entitled:

"The Gaseous Theory of Earth-Genesis in the Light of the Kinetic Theory of Gases"; "Vestiges of Cosmogonic States and Their Significance"; "The Decisive Testimony of Certain Vestiges of the Solar System"; "Futile Efforts"; "The Forbidden Field"; "Dynamic Encounter by Close Approach"; "The Evolution of the Solar Nebula into the Planetary System"; "The Juvenile Shaping of the Earth"; "Inner Reorganization of the Juvenile Earth"; "Higher Organization in the Great Contact Horizons."

Finite Collineation Groups (*The University of Chicago Science Series*). By *Hans F. Blichfeldt, Professor of Mathematics in Leland Stanford Junior University.*

12mo, cloth; \$1.50, postage extra

A book of especial interest and significance to students and teachers of higher mathematics and to all concerned with the development of mathematical science. The theory of finite collineation groups (or linear groups) as developed so far is to be found mainly in scattered articles in mathematical journals, in addition to a few texts on group theory. The author has given in the present volume an outline of the different principles contained in these publications, and has at the same time made an effort to depend upon a minimum of abstract group theory.

Principles of Money and Banking. (Materials for the Study of Economics Series.) *A Series of Selected Materials, with Explanatory Introductions.* By *Harold G. Moulton, Assistant Professor of Political Economy in the University of Chicago.*

xl+284+502 pages, 8vo, cloth; \$3.00, postage extra (weight 3 lbs. 4 oz.)

This volume of readings covers the principles of money in the light of experience, including a discussion of the various monetary controversies; and it deals with the subject of money in connection with the evolution of economic society in a way not hitherto attempted. On the banking side, in addition to the usual treatment of commercial banks, including the operation of the new federal reserve system, the book makes a careful analysis of the principles of agricultural credit; of the numerous types of co-operative banking agencies; and of savings and investment institutions, ending with a discussion of the problem of financial concentration and control, popularly called the "money

trust." The explanatory introductions to the various chapters give continuity to the wide variety of materials, tables, charts, arguments, opinions, etc., and in this way the virtues of a text and of a collateral book of readings are combined in one volume.

Exercises and Questions in Money and Banking. (Materials for the Study of Economics Series.) By *Harold G. Moulton.*

100 pages, 12mo, paper; 50 cents, postage extra (weight 9 oz.)

A book to accompany the author's *Principles of Money and Banking*. It is designed to serve as a basis for classroom work or private study.

Exercises in Current Economics. (Materials for the Study of Economics Series.) By *Walton H. Hamilton.*

150 pages, 12mo, paper; 50 cents, postage extra (weight 13 oz.)

This book of exercises is designed to accompany the author's *Current Economic Problems*. The questions, based directly on the readings, are so worded that in answering them the student is compelled to do his own thinking. The problems, based indirectly on the text, form the real test of the student's reading and thought.

Second-Year Mathematics for Secondary Schools. By *Ernst R. Breslich, Head of the Department of Mathematics in the University of Chicago High School.*

xviii+340 pages, 12mo, cloth; \$1.00, postage extra (weight 1 lb. 10 oz.)

The primary aim of this book is to furnish a progressive continuation of the form of correlated mathematics presented in the highly successful *First-Year Mathematics for Secondary Schools*. The material as arranged in this second-year course opens to the student a broader, richer, and more useful field of ideas, and lays a more stable foundation for future work, than does any separate treatment. A great saving of the student's time is effected by developing arithmetic, algebra, geometry, and trigonometry side by side. This union of subjects also makes unnecessary the long and tiresome reviews usually given at the beginning of each subject. The book contains exercises in sufficiently large numbers to allow the instructor some choice in case he wishes to reduce the scope of the course.

American Prose. By *Walter C. Bronson, Professor of English Literature in Brown University.*

xii+738 pages, 12mo, cloth; \$1.50, postage extra (weight 2 lbs. 4 oz.)

All interested in American literature will be glad to know of the companion volume to Professor Bronson's widely used anthology of *American Poems*. This new volume of representative selections from the prose literature of our country will quickly take its place as a standard book for classroom use, as well as for private reading. Clear and attractive in topography, *American Prose* contains a fund of highly interesting material. The selections cover the period 1607-1865, and represent the work of thirty-seven authors.

The Story of the New Testament. (Handbooks of Ethics and Religion Series.) By *Edgar Johnson Goodspeed, Professor of Biblical and Patristic Greek in the University of Chicago.*

160 pages, 12mo, cloth; \$1.00, postage extra (weight 1 lb.)

The purpose of this volume is to present in a vivid and popular manner the situations out of which the several books or letters of the New Testament arose, and the way in which each book or letter endeavored to meet the special situation addressed. The author emphasises the fact that Christianity did not spring from the New Testament, but the New Testament from Christianity. Professor Goodspeed's highly interesting narrative brings out clearly the practical and occasional character of many of the books of the New Testament, and, being written without technicality or elaboration, is admirably adapted for use in adult Bible classes and in biblical courses in colleges. For the lay reader also it gives in fresh and attractive form much information not easily accessible elsewhere.

Handwork in Religious Education. (Principles and Methods of Religious Education Series.) By *Addie Grace Wardle, President of the Cincinnati Missionary Training School of the Methodist Episcopal Church.*

175 pages, 12mo, cloth; \$1.00, postage extra (weight 1 lb.)

To meet the increasing demand for handwork as a means of teaching children in Sunday schools, Dr. Wardle, out of her practical experience as head of an important training school, has prepared the present book for classes of teachers in churches and

in community training schools. One of the purposes of the volume is to train the teacher in the use of a wide range of material and to acquaint her with the various means of securing it.

The Woman Movement from the Point of View of Social Consciousness (*Philosophic Studies, No. 6.*) By *Jessie Taft.*

72 pages, royal 8vo, paper; 50 cents net, 54 cents postpaid

It is the purpose of this volume to determine just what are the problems represented by the woman movement, to trace their connection with the larger, more inclusive social problems, and to indicate in a general way the direction from which a solution may be expected.

The Great Revival in the West, 1797-1805. By *Catherine C. Cleveland.*

xiv+216 pages, 8vo, cloth; \$1.00, postage extra (weight 1 lb.)

A valuable addition, for libraries, to source material in American history; and to ministers and laymen it shows in a striking way the progress made in theology and religious practice in America during the last century.

The Nullification Controversy in South Carolina. By *Chauncey S. Boucher, Assistant Professor of American History in Washington University.*

xi+399 pages, 12mo, cloth; \$1.50 net, postage extra (weight 1 lb. 11 oz.)

The story of the nullification controversy in South Carolina as it is found in the writings of the men who were participants in it. The author fortunately had access to the unpublished correspondence and papers of prominent leaders of the opposing factions, and he has succeeded in delineating the various shades of party beliefs at all stages of the controversy in such a way as to hold the interest of all students of American political history.

The Function of Socialization in Social Evolution. By *Ernest W. Burgess, Assistant Professor of Sociology in the University of Chicago.*

viii+237 pages, royal 8vo, cloth; \$1.25, postage extra (weight 1 lb. 14 oz.)

That socialization, rather than geography or heredity, is the dominant factor in social evolution is the author's contention in this able essay. The evidence for this position is presented

in the study of the factors involved in discovery and invention, in social progress, and in personal development.

A History of the University of Chicago. By *Thomas Wakefield Goodspeed.*

xiv+522 pages, 8vo, cloth; \$3.00, postage extra (weight 3 lbs. 4 oz.)

This history of the University is remarkably full, especially for the earlier years, and is vividly and sympathetically told by one who was a part of much that he describes. The unique success attending President Harper's great experiment in the organization of the University—few of its features having been modified and its leading features having widely influenced American education—is carefully brought out; the notable architectural development of the University is shown; and the achievements of President Judson's administration in the way of new endowments, new buildings, and new educational ideas are strikingly presented. The series of twenty-two full-page photogravures illustrating the volume is probably the finest collection of views of the University that has yet been made.

The University of Chicago. An Official Guide. By *David Allan Robertson.*

60 illustrations, 134 pages, paper; 79 cents postpaid.

In its great variety of well-organized information regarding the University's history and buildings and the persons particularly associated with them, and in its unusually artistic illustrations, this little volume, prepared by one especially well equipped for the purpose, will meet very satisfactorily the many inquiries of visitors, new students, and others interested in the remarkable development and present status of the University.

Essays in Experimental Logic. By *John Dewey, Professor of Philosophy in Columbia University.*

viii+444 pages, 12mo, cloth; \$1.75, postage extra (weight 1 lb. 10 oz.)

Students and teachers of philosophy and logic will recognize in this book of essays the same cogency of reasoning and the same power of clear and interesting statement that have brought to Professor Dewey in his other books the reputation of being one of the ablest thinkers on philosophical subjects in the country. This new volume, of over four hundred pages, contains fourteen chapters, including a highly significant introduction of seventy-

five pages; and among the subjects discussed are "The Relation of Thought and Its Subject-Matter," "The Antecedents and Stimuli of Thinking," "Data and Meanings," "The Objects of Thought," "Some Stages of Logical Thought," "The Logical Character of Ideas," "The Control of Ideas by Facts," "The Existence of the World as a Logical Problem," and "The Logic of Judgments of Practice."

Technical students of philosophy will find the volume almost indispensable in following critically the contemporary development of philosophical thought.

A History of Greek Economic Thought. By *Albert A. Trever*,
Professor of Greek in Lawrence College.

162 pages, paper, 8vo; 75 cents, postage extra (weight 13 oz.)

A striking reinterpretation of Greek economic thought in the light of modern humanitarian economy. To the classical student and the modern economist the book will bring, with new interest, important phases of Greek thought and many vital points of contact between Greek and modern economy. Constant reference is made in the book to the actual economic environment of the Greeks, as a proper background for their theories.

The presentation is chronological, the various chapters taking up in order the discussion of economic ideas before Plato, and those of Plato, Xenophon, Demosthenes and Isocrates, Aristotle, and the minor philosophers.

Public Libraries and Literary Culture in Ancient Rome

By CLARENCE E. BOYD

Professor of Greek in Emory College

By a study of classical literature, inscriptions, and monuments Dr. Boyd has been enabled to present for the first time an adequate conception of public libraries in Ancient Rome. His treatise concerns itself with the history, equipment, contents, management, object, and cultural significance of the Roman public library, particular attention being directed to the libraries of the first one hundred and fifty years of the Empire.

The book has extensive footnotes and a bibliography. The carefully prepared index includes not only the names of persons and places, but all words and phrases of significance mentioned in the text.
